

NARADA

RIGHT PLACE AT THE RIGHT TIME

A 3- RL agent phase sequencer that cuts intercept time to [X]sec at [Y]% interception

.3 horizontal nodes: Agent A (Explore) → Agent C (Balance) → Agent B (Intercept). Use arrows, not a list.

.On each arrow, one short label: the trigger condition for that transition (e.g. "coverage > 80%" / "confidence gated handoff"). This is your one chance to show the phase-sequencing claim visually instead of in a sentence.

WHY THE 3 DIFFERENT TYPES OF RL AGENTS
NOT 1
WHAT ARE THEY

Our main
differentiation
Aamir's idea and
human intelligence
layer

ALL THE MAIN the numeric metrics we achieved
